(1) KNX PARAPET CONSTRUCTION.

Parapet construction makes your building beautiful by hiding roof clutter, giving the building a neat finished shape and allowing stylish design that improves its overall appearance.

A well-proportioned parapet make buildings like a bungalow look taller and more grand. It balances the height of the walls and roof, so the whole house looks better designed.

Materials used;

Woods [2 by 2, 1 by 3, 1 by 6, 9 inches boards] for construction, Concrete, cement and iron rods for casting. It may look expensive but it is actually closely affordable to soffit.

Roof Soffit

At KNX we have professionals who will make sure that your parapet is well constructed with the right materials in the right proportion; because a parapet well constructed ensures strong and firm roofing that will withstand strong weather condition like storm or heavy rainfall.

A parapet construction depending on the wideness of the building takes not more than five (5) days to complete; and if it is well constructed it can last long as the foundation of your building.

(2) KNX ROOFING SYSTEM.

We provide professional roofing solutions designed to protect, enhance, and add lasting value to your property. From constructing and repairs to maintenance and inspections, our skilled team ensures durable results with quality materials and expert craftsmanship.

Our company deals mainly on residential roofing. we have professionals who construct roofs not just for the money but for passion and joy that comes after seeing their works admired by millions of people.

As for the materials, the project manager of our company ensures that the right quality and quantity are used.

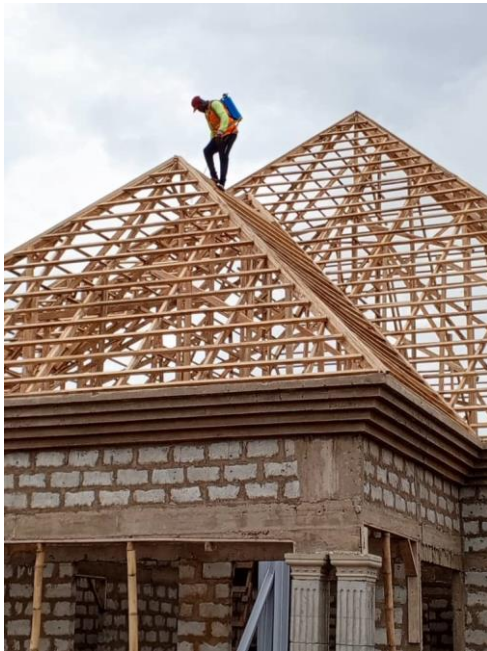

Over estimate of materials are strictly not welcomed at our company; we construct building to build trust and global recognition, and in doing so we avoid incidents that might stain our reputation.

KNX roofing system have stood the test of time, and for more than five (5) years we have the pictures and videos of our works to prove it. These videos can be found on our social media platforms like YouTube, Facebook etc.

We spray chemicals on the roof skeleton to prevent insect attack for long lasting construction.

Then after covering the roof we also spray chemicals like **DDAC (Dodecyl Dimethyl Ammonium Chloride)** a powerful, long-lasting biocide used in soft washing to kill fungi mold, and algae, providing protection.

Roof Rejuvenation oils; we spray it to penetrate the asphalt shingles, restoring flexibility, reducing granule loss, and adding 5-15 years of life.

silicone / Acrylic coatings; we apply it to flat or low-slope roofs to create a seamless, waterproof, and uv-reflective membrane, increasing energy efficiency and longevity.

HOW WE USE OUR TIME EFFICIENTLY TO KEEP ALL OUR PROJECTS ONGOING

We are a growing company hungry for global recognition because we are confident on what we believe we do better.

We have a **Senior project Manager** who over sees or manage the project budget; Ensures stakeholder satisfaction; Evaluate project performance; Create and lead a team; Overcomes

obstacles like over usage of materials, faulty materials or over estimate of materials; He monitors project progress and set deadlines; And most importantly, he plans and develop the project scope, because every project starts with an idea.

We have a **Senior Project Engineer** who serves as the technical lead, planning, executing, and overseeing engineering projects from conception to completion.

He bridge the gap between management and technical teams, ensuring projects stay within budget and on schedule while adhering to safety and quality standards; He acts as a liaison between project managers, clients, contractors, and other team members to communicate updates and resolve technical problems; As for Documentation, he manages project documentation, including permits, change orders and progress reports.

It is very important to know that the project managers and project engineers are some of the most important personnels when constructing your building.

We also have foreman's down to carpenters masons and electricians who dedicate so much on what they do to ensure long lasting projects.

We have enough building personnels who oversees all our project at all location in Ghana.

(3) KNX ASPHALT SHINGLES INSTALLATION.

Asphalt shingle-roofs are one of the most popular modern cost-effective roofing choice in Africa. It is widely used around the world because of its high durability and diverse styling. They enable easy installation and repair and can last for longer period of time.

This type of roofing are better looking and they come with different colors and styles, enabling architects and engineers to chose the right paint to use in the body parts of your building.

This type of roofing requires professionals who have not only learnt it in school or ~~~as an~~~ apprentice, but professionals who have a lot of experiences; but wrong or faulty installation can cause a lot to repair.

At KNX we ensure proper installations and we have a lot of completed projects to prove our worth.

When it comes to this type of roofing It is better you go for experience than price and nepotism. That is why we do not post AI generated works rather we post works our personnel's went through time and sweat to complete.

(4) KNX ASPHALT SHINGLES SUPPLIES.

Because of our many years of asphalt shingles installations, we deal with lot and lots of shingles dealers; and we are privilege to shop the materials.

We have a storage warehouse where our bulk materials are stored; when you purchase in bulk we supply them to your location. We are fast and reliable.

Because of our many years in the system we supply to installers whole sale prices and they get to see their goods before payment is done.... we do this because we have confidence that our goods are quality.

Shingles are not installed with an ordinary nails, we also have those nails (1-1/4 inch to 2-inch of galvanized nails); Bitumen-based sealant together with granules (stones) which is used on the areas the nails are used to prevent leakages during or after heavy rainfall.

(5) KNX PARAPET AND ROOFING FINISHED WORK.

At KNX because of our consistency and professionalism, we have completed many parapet and roofing projects over the years.

The photos you see on this website are not just photos but photos “making experience visible”.

We take our time to craft a perfect roofing and by using quality materials that has ling life span we construct your roofing system to match modern designs and standards

Motto: “Making Experience Visible”
